HANDLING THE UNEXPECTED

Emergency Engine Stop*
The ENGINE START/STOP button may be used to stop the engine due to an emergency situation even while driving. If you must stop the engine, choose one of the following operations:
• Press and hold the ENGINE START/STOP button for two seconds, or
• Firmly press the ENGINE START/STOP button two times.

The steering wheel will not lock. Because turning off the engine also disables the power assist the engine provides to the steering and braking systems, it will require significantly more physical effort and time to steer and slow the vehicle. Use both feet on the brake pedal, if necessary, to slow the vehicle and stop immediately in a safe place.
Do not press the button while driving unless it is absolutely necessary for the engine to be switched off.

Emergency Towing
Call a professional towing service if you need to tow your vehicle.

All models
Flat bed equipment: The operator loads your vehicle on the back of a truck. This is the best way to transport your vehicle.

2WD models
Wheel lift equipment: The tow truck uses two pivoting arms that go under the front tires and lift them off the ground. The rear tires remain on the ground. This is an acceptable way to tow your vehicle.

NOTICE
Trying to lift or tow your vehicle by the bumpers will cause serious damage. The bumpers are not designed to support the vehicle’s weight.
Improper towing such as towing behind a motorhome or other motor vehicle can damage the transmission.

Tire Pressure Monitoring System (TPMS)
Monitors the tire pressure while you are driving.

If your vehicle’s tire pressure becomes significantly low, the low tire pressure indicator comes on and a message appears on the multi-information display. The specific tire with low pressure is displayed.

What to Do
Stop your vehicle in a safe place. Check the tire pressure and adjust the pressure to the specified level. The specified tire pressure is on a label on the driver’s doorjamb.

Tire Fill Assist
Your vehicle gives you visual and audible alerts to help you adjust the tire pressure to its appropriate level when the vehicle is on.

While inflating: The system beeps and the exterior lights flash once every 5 seconds.
When the correct pressure is reached: The system beeps and the exterior lights flash continuously for 5 seconds. Stop filling the tire.
If you overinflate: The system beeps and the exterior lights flash twice every 3 seconds.

NOTICE
Driving on an extremely underinflated tire can cause it to overheat. An overheated tire can fail. Always inflate your tires to the specified pressure.

*if equipped
